

Introduction to AI and GenAI

Summary

*«Artificial Intelligence is conquering
and fundamentally changing our world –
every aspect of our life, our economy
and our society»*

Selçuk Boydak,

AI entrepreneur, founder of the AI Business School

Artificial Intelligence is imitating and augmenting human intelligence

Machines

and

**Computer
Programmes**

◀ **imitating** ▶

◀ **augmenting** ▶

◀ **partially
replacing** ▶

Human Intelligence, i.e.

human thinking

and

human acting

Some basic terminology

Artificial Intelligence (AI)

Technologies that imitate or augment human behaviour

Machine Learning (ML)

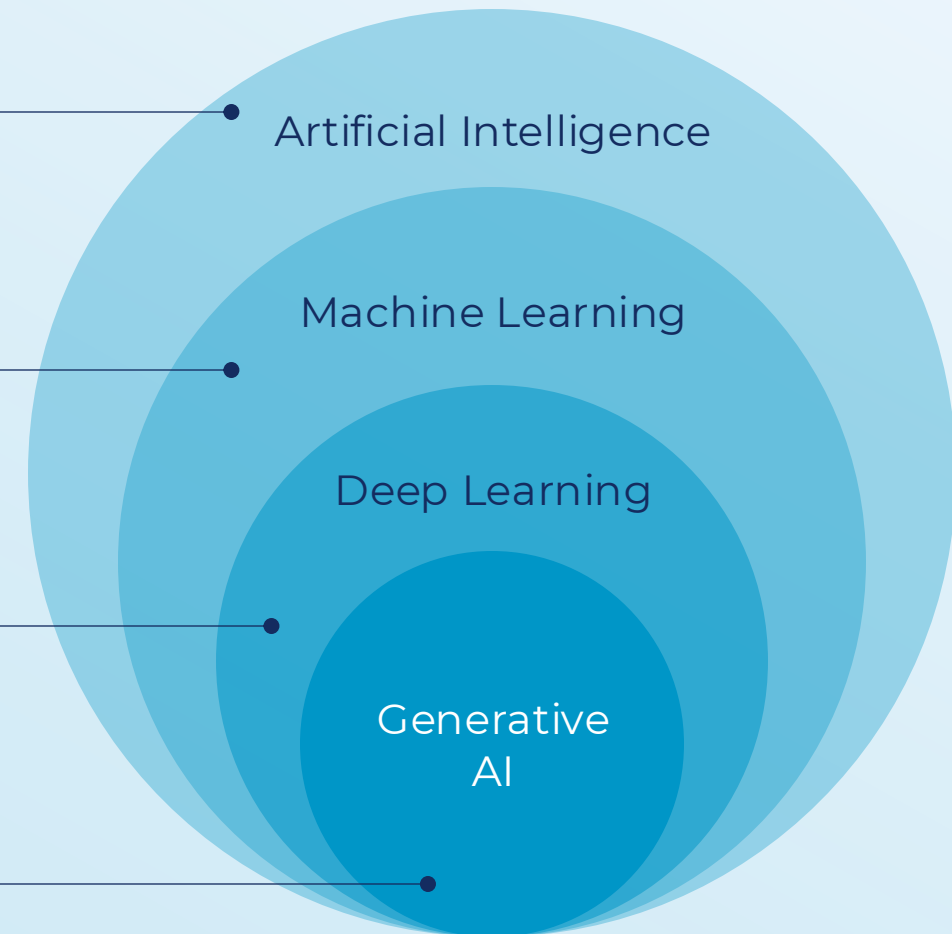

A subset of AI using advanced algorithms to detect patterns in large data sets, allowing machines to learn and adapt

Deep Learning (DL)

A subset of ML using neural networks to simulate how human brains work

Generative AI (GenAI)

A subset of DL models that, based on provided input, generate content like texts, images, videos, software code, etc.

Not only able to ...

- ... search
- ... analyze
- ... classify
- ... evaluate
- ... rate information

**But also to ...
generate and create
new content on its
own**

Examples

Generative AI ...

writes texts

prepares graphical charts

creates software codes

composes songs

creates images and pictures

many more

Paradigm shift by GenAI

AI can **create new things**
on its own

Super-powerful AI solutions
become **easily accessible** for
billions of «normal people»

It's super easy, intuitive and doesn't require any prerequisites

For the first time

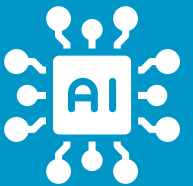

Talk to powerful AI like to a human being

Ask questions of any kind and immediately get answers

GenAI as your perfect assistant

- Comforting you throughout the day
- Giving advice, support and assistance whenever needed

The rising importance of «Prompting»

Prompting is the art of interacting with AI by making use of our natural language – by asking it with our own words to do something for us

Text-to-action by making use of prompting

**Text
generation**

**Image
creation**

**Video
creation**

**Code
generation**

**Speech
generation**

**Sound
generation**

...

Success factors for effective prompting

Examples

GenAI has democratized the use of AI

Before GenAI

Classic AI solutions like machine and deep learning were primarily designed and operated by highly specialized experts like data scientists and ML engineers

Today

Powerful AI solutions have become literally accessible for everyone in both dimensions:

- direct practical use of standard AI tools
- creation of bespoke AI solutions based on modern no-code tools

And GenAI helps to overcome previous bottlenecks for scaling up AI

Need for
highly trained
AI specialists
(e.g. on machine &
deep learning)

Need for large
amounts of
qualitative and
consistent data

**GenAI helps to overcome these bottlenecks and have
your AI superheroes by your side at any time**

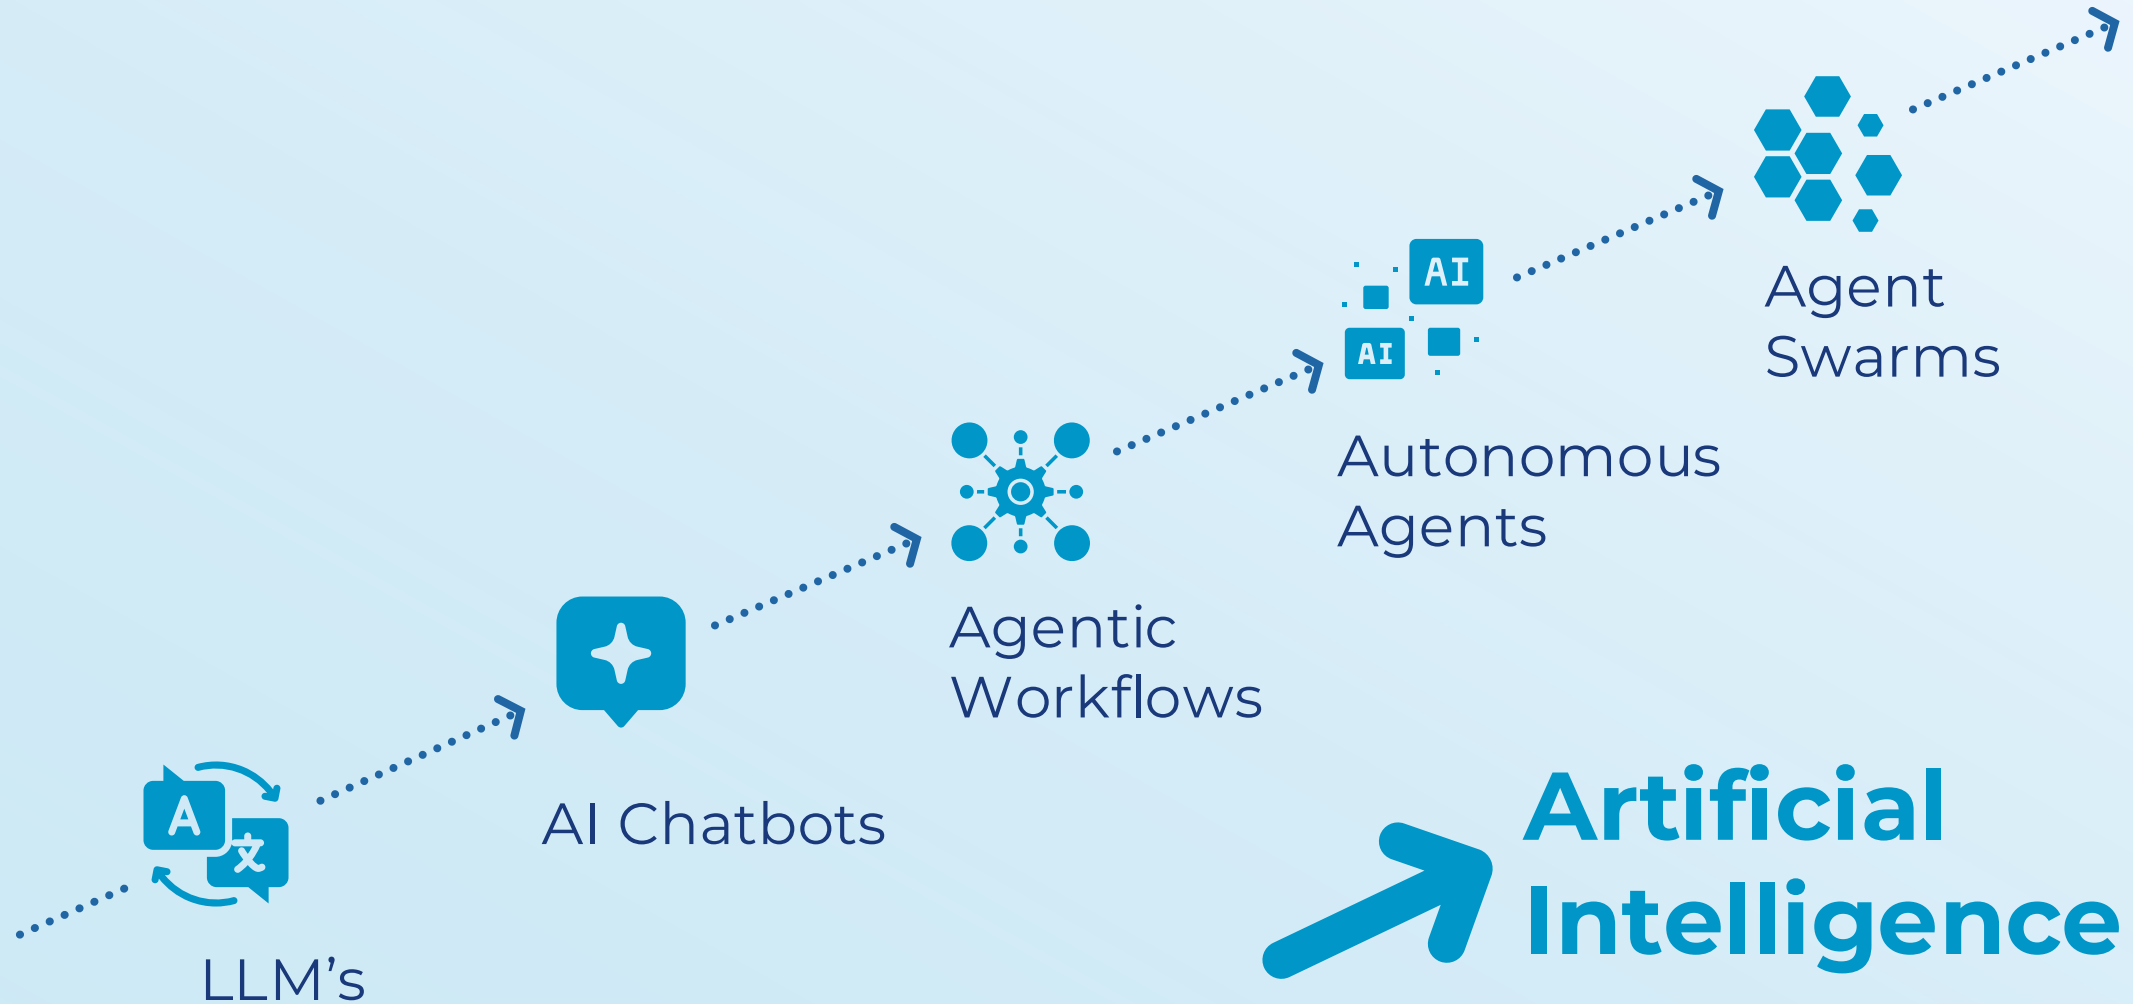

Automate, simply everything

**Not only simple
repetitive tasks**

**But also very
sophisticated,
highly complex
and creative tasks**

The next AI wave is already fully underway

Innovation at unprecedented speed

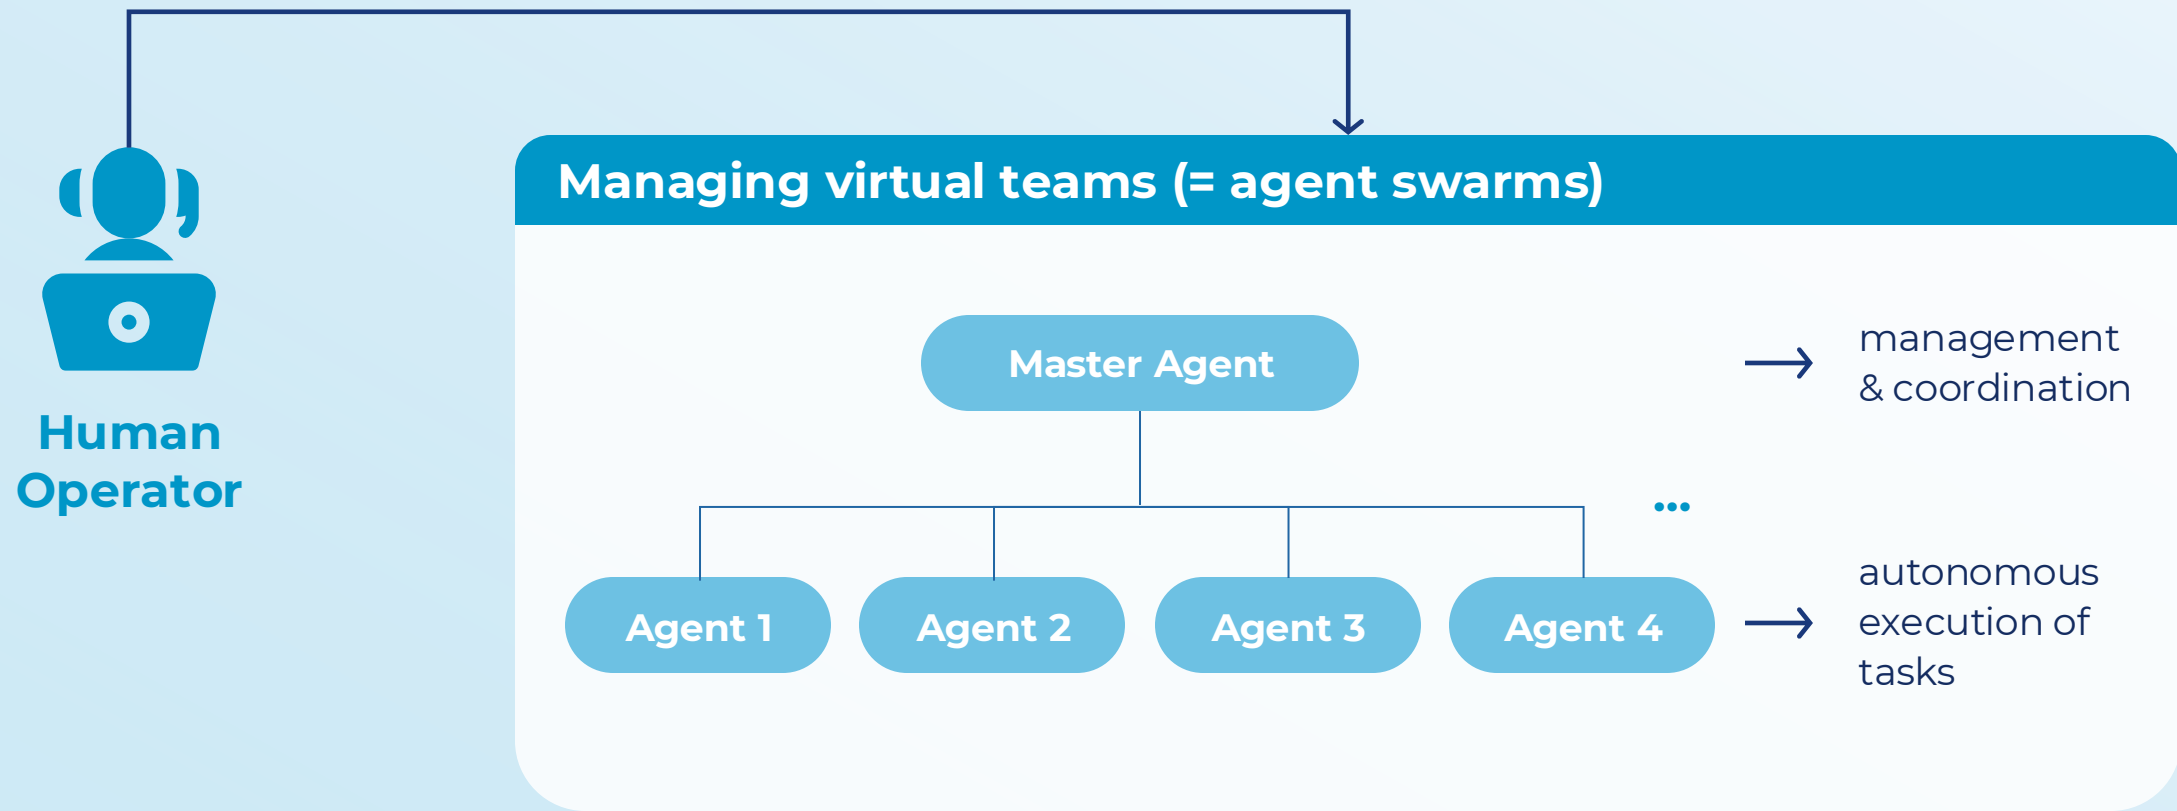

Autonomous AI Agents mimic humans and become increasingly autonomous.

And they can self learn just like a human.

Agent swarms to create entire virtual teams

Productivity levels will further boost

Two ways to leverage AI in an enterprise environment

Standardized
«off-the-shelf»
productivity tools

Tailor-made
company-specific
AI solutions

In enterprises various AI technologies will be deployed at the same time

Everyone will get used to create and apply **Standardized AI Solutions** like Chatbots, Copilots and simple AI Agents in daily job routines – comparable to our current use of our notebooks, smart phones and office software solutions like Excel or Word

At the same time, central AI / Data teams will develop and provide a selection of more sophisticated and scalable **Tailor-made, Company-specific AI Solutions**

Why AI is so important for all of us

Individual-level

Personal AI skills and readiness will be essential to maintain personal job security and viability as well as enhance personal career opportunities

Enterprise-level

An AI-ready workforce will be THE major competitive advantage in a rapidly changing world and will ensure optimal levels of the enterprise's

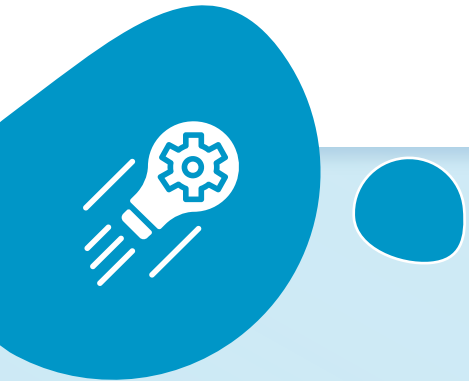

- agility & speed
- innovation power
- productivity & efficiency
- competitiveness

AI will impact all areas of our lives

It's no option to ignore it, stay illiterate and not understand it

To be among the future winners and active shapers, we will need to learn how to make good and positive use of AI

Let's embrace it!
