

Typical AI Use Case Areas

Overview

Typical AI use case areas

- Leverage AI / GenAI for simple and complexes searches
 - across different information sources
(e.g. Internet, internal / external databases)
 - with the possibility to specify the structures and formats of the expected results

- Analyze documents of different types and lengths
 - prepare summaries
 - identify key points
 - draw conclusions
 - answer specific questions

- Create qualified content in various modalities, e.g.
 - written texts
 - spoken language
 - images, visuals
 - videos
 - ...

- Transform one form of content into another
 - multiple languages
 - different tonalities and cultural styles
 - transcription of spoken language into text
 - generation of spoken language based on texts
 -

- Brainstorming ideas
- Structuring and grouping of ideas
- Evaluation and prioritization of ideas
- Operationalization of ideas

- Analyze large amounts of data
 - from different sources and in different formats
 - gaining insights, identifying trends and drawing conclusions
 - deriving predictions and forecasts

- Automated software code generation
 - simple coding tasks that can even be initiated and supervised by non-IT professionals
 - advanced and more complex coding tasks that require more technical skills
- Automated code optimization, explanation and documentation

- Partial or full automation of entire processes
 - consisting of a sequence of multiple activities and consecutive steps
 - to be automated by a combination of various prompts, AI solutions or even AI agents
